PRODUCT IDENTIFICATION AND TRACEABILITY

1.0 GENERAL

1.1 Scales, rental scales, parts, and product-related supplies are identified and tracked from receipt of product through installation, as described in QP-0800.

1.2 The status of the product will be readily identifiable based on the storage location or tagged identification.

1.3 When traceability is required, the serial number of the item will be identified on the tag.

1.4 The records verifying this activity are retained as defined in the QP-0600 through QP-1000 series procedures.

1.5 The identification and traceability of reference standards and reference materials is addressed in QM Section 11 and the QP-1100 series procedures.
